## Experience

**Airtable** - Senior Software Engineer (San Francisco, CA)

06/2021 - Current

*AI-powered platform for building custom business applications and automating workflows*

- Served as tech lead for the 4-engineer Field Agent Growth team, driving AI growth and credit visibility initiatives. Delivered reactive and proactive AI field agent suggestions that increased field agent adoption by 202% and 48%, respectively, in separate A/B experiments.
- Led cross-functional engineering initiatives across Airtable Interfaces and Forms, coordinating 5 engineers across 3 teams to deliver a multi-page Interface Designer redesign on an accelerated timeline. Served as sole tech lead for Forms growth initiatives, delivering Form Sections end-to-end, building custom field validation that enabled Airtable's rollout at Meta, and advising on the subsequent Data Validation project through technical guidance and code reviews.
- Served as a primary owner of core Airtable features across the Apps Forms, Records, and Customization area, including shared ownership of the Interface Designer. Acted as Area Escalation Captain, coordinating on-call scheduling, task prioritization, and incident escalations for 6 engineers. Led Frontend and Product onboarding, coordinating sessions and presenters for new engineers.

**LinkedIn** - Senior Software Engineer (Sunnyvale, CA)

04/2017 - 06/2021

*Connecting the world's professionals to make them more productive and successful*

- Acted as the tech lead for accessibility, tracking, and job posting flow development for the SMB job posting team.
- Mentored junior engineers, including an apprentice from a non-traditional background, and led the UI on-call rotation for the 12-engineer Jobs team. Served as a platform reviewer for the Jobs area, providing final code review and approval before pull requests could be merged.
- Identified and convinced leadership to prioritize Jobs Management availability and site speed as P0 projects in the team's OKRs. Developed a comprehensive monitoring and alerting plan, collaborating with SRE and backend engineers to implement it across the frontend and backend, helping achieve 99.9% application availability. Led site speed improvements that reduced initial load times by 28% and subsequent load times by 51% for users at the 90th percentile of latency.

**Zenefits** - Product Engineer, Core Platform (San Francisco, CA)

09/2016 - 02/2017

*All-in-one HR platform*

- Built new features with Django and EmberJS for the internal marketing email microservice to increase lead generation. Developed key features, including email address verification, Kafka integration between the main Zenefits application and the marketing email microservice, and support for customizable email templates.
- Worked across the full stack, helping launch the new Semi-Manual Payroll product within my first two weeks, developing background check features for the Hiring product in EmberJS, and maintaining the Business Intelligence product through frontend and backend support.

**Yiftee** - Front-End Engineer / AngularJS Developer (Menlo Park, CA)

11/2014 - 09/2016

*Digital gifting solution for merchants, brands, and enterprises*

- Designed and architected core features for our Angular application such as building the data visualization for our merchant report page and refactoring the frontend application into its own repository from a monorepo.
- Expanded into backend API development in Rails, taking full ownership of features from initial design through production. Integrated the MasterPass digital wallet into the checkout flow and built a self-service portal for merchants to customize their eGift pages.

## Education

**University of California, Irvine**, B.S. Biology (Irvine, CA)

2010
